Brainstorm & Idea Prioritization Template

Project: Auto Ticket Classification using Flow Designer

Team ID: SWTID-2026-3593

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Selected Problem Statement: The school IT helpdesk receives multiple incident requests from students and teachers for Wi-Fi issues, projector failures, password problems, and slow computers. IT staff manually identify the issue type, select Category and Subcategory, and inform the caller about ticket creation. This is time-consuming, error-prone, and difficult to scale.

Step-2: Brainstorm, Idea Listing and Grouping

- Automatic keyword-based ticket classification using ServiceNow Flow Designer.
- Dependent Category and Subcategory choices to maintain valid combinations.
- Automated email acknowledgement after ticket creation.
- Structured ticket fields for consistent storage and routing.
- Future extensions: assignment automation, SLA tracking, and predictive intelligence.

The following are actual ServiceNow screens from the supplied project documentation, showing how the classification ideas were implemented.

Activity : 3 Wi-Fi Issue Classification.

- Select **If** condition.
- Condition label : SD is **Wifi or Network** (Give as ur wish).
- Condition 1 : Using data pill picker Select **Short description** as Field , and operator **Contains** , Value is **Wi-Fi**.
- Condition 2 : Using data pill picker Select **Short description** as Field, and Operator is **Contains**, Value is **Network**.
- Then Click **Done** Button.

- Now Click **Action** to **Update record**.
- Action Inputs.
- In Record Field drag and drop data from the right side.
- Table : Auto updates as Incident Workflow.
- Fields Set **Category** = **Network**.
- Set **Subcategory** = **Wi-Fi**.
- Then Click the **Done** button.

Actual ServiceNow Flow Designer — Wi-Fi classification

Activity : 4 Projector Issue Classification.

- Now Select the **Else If** Condition.
- Condition label : SD is **Projector or Hardware**.
- Condition : **Short description Contains Prajector**.
- Then Click the **Done** button.
- Now Action is an **Update record**.
- Set **Category = Hardware**.

- Set **Subcategory = Projector**.

Step-3: Idea Prioritization

- 1. Keyword-based automatic classification — Core implementation and directly addresses manual classification.
- 2. Dependent Category/Subcategory choices — Supports data accuracy and consistent classification.
- 3. Automated email notification — Improves caller communication.

- 4. Structured ticket fields — Supports standardized ticket records.
- 5. Predictive intelligence — Future enhancement, not part of the current documented implementation.

- Then Click the **Done** button.

Activity : 5 Password Issue Classification.

- Now again select **Else If** condition.
- Condition label : **SD is Forgot password.**
- Condition : **Short description contains Forgot password.**
- Then Click the **Done** button.
- Now Action is an **Update Record**.
- Set **Category** = **Access**.
- Set **Subcategory** = **Forgot Password**.
- Then Click the **Done** button.

Actual ServiceNow Flow Designer — Password classification

Activity : 6 Slow Computer Classification.

- Now Again Click the **Else If** Condition.
- Condition label : **SD is Performance**.
- Condition : **Short description contains Slow Computer**.
- Then Click the **Done** button.
- Now Action is an **Update Record**.
- Set **Category** = **Performance**.
- Set **Subcategory** = **Slow computer**.
- Then Click the **Done** button.

Actual ServiceNow Flow Designer — Slow computer classification

Validation of the Selected Idea

The supplied project documentation includes actual testing screenshots showing the automatic classification behavior. These demonstrate the practical result of the selected idea rather than an illustrative mock-up.

- Now Click the **Activate** button from the top right corner.

PHASE 6 : Testing, Validation & Security.

- The objective of Phase 4 is to ensure that the developed solution works as expected, meets all functional requirements, and follows basic security and access control best practices.
- This phase validates the end-to-end automation, confirms data accuracy, and ensures that only authorized users can access or modify ticket data.

Data Validation Checks

- Mandatory fields captured correctly.
- Auto-number generated without duplication.
- Category and Subcategory values stored accurately.
- Reference fields resolve correctly to user and group tables.

Activity : 1 Testing & Validation.

Test Scenario 1

- Enter one Caller Name.
- Short Description: WiFi not working in library
- Then Save the Form.
- And Reload the Form.

Activity : 3 Test Scenario 2

- Enter one Caller Name.
- Short Description: Projector not turning on.
- Then Save the Form.
- And Reload the Form.
- Then it fills auto as :
- Category → **Hardware**.
- Subcategory → **Projector**.
- Then Email sent to caller Mail id.

Final Selected Idea

Auto Ticket Classification using ServiceNow Flow Designer: when a ticket is created, the flow checks the Short Description for predefined keywords and automatically assigns the appropriate Category and Subcategory, followed by an email notification to the caller.
