

Project Development Phase Model Performance Test

Date	03 October 2026
Team ID	SWTID-2026-3593
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Values	Screenshot
1.	Model Summary	Salesforce automation setup for Data management using Object, Fields and Reports. Note : Import Records if data Match Correctly then Records will Created or Else it will Show Error	
2.	Accuracy	Training Accuracy - 98% Validation Accuracy - 98%	
3.	Confidence Score (Only Yolo Projects)	Class Detected - If detecting Object and fields name if wrong and other activity Confidence Score - If the model is 92% sure the object is correctly detected	

Model Performance Testing – Auto Ticket Classification using Flow Designer

1. Model Summary: ServiceNow Flow Designer automation for automatically classifying school IT tickets. When an incident is created, the flow evaluates the Short Description for predefined keywords and assigns the corresponding Category and Subcategory. The automation also

sends an email notification to the caller after classification. The solution is no-code and is designed for easy maintenance and scalability.

2. Classification Test Results: Test Scenario 1: Short Description – “WiFi not working in library” → Category: Network; Subcategory: WiFi; email sent to caller. Test Scenario 2: Short Description – “Projector not turning on” → Category: Hardware; Subcategory: Projector; email sent to caller.

3. Validation: Data validation checks include mandatory fields, unique auto-number generation, accurate Category and Subcategory values, and correct resolution of reference fields to user and group tables.

4. Accuracy: The supplied project documentation does not provide a numerical model/training accuracy or validation-accuracy percentage. Instead, functional validation is documented through the test scenarios and expected Category/Subcategory outputs.

5. Confidence Score: Not applicable. The project is a rule-based, no-code Flow Designer automation that classifies tickets using predefined keyword conditions; the supplied documentation does not define a model confidence-score metric.
