Problem – Solution Fit Template

Date	03 October 2026
Team ID	SWTID-2026-3593
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ **Understand the existing situation in order to improve it for your target group.**

Template:

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) Who is your customer? I.e. working parents of 0-5 y.o. kids	CS	Explore AS, differentiate
	6. CUSTOMER CONSTRAINTS What constraints prevent your customers from taking action or limit their choices of solutions? I.e. spending power, budget, no cash, network connection, available devices.	CC	
Focus on J&P, tap into BE, understand RC	2. JOBS-TO-BE-DONE / PROBLEMS Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides.	J&P	Focus on J&P, tap into BE, understand RC
	9. PROBLEM ROOT CAUSE What is the real reason that this problem exists? What is the back story behind the need to do this job? I.e. customers have to do it because of the change in regulations.	RC	
Identify strong TR & EM	3. TRIGGERS What triggers customers to act? I.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news.	TR	Extract online & offline CH of BE
	4. EMOTIONS: BEFORE / AFTER How do customers feel when they face a problem or a job and afterwards? I.e. lost, insecure > confident, in control - use it in your communication strategy & design.	EM	
10. YOUR SOLUTION If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour.		SL	
8. CHANNELS of BEHAVIOUR 8.1 ONLINE What kind of actions do customers take online? Extract online channels from #7		CH	
8.2 OFFLINE What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development.		CH

Problem – Solution Fit: Auto Ticket Classification using Flow Designer

Customer / Target Group: School IT helpdesk students and teachers who raise incident requests for common IT issues such as Wi-Fi problems, projector failures, password/access problems, and slow computers.

Customer Problem: IT staff manually review each support request, identify the issue type, select the correct Category and Subcategory, and inform the caller about ticket creation. This process is time-consuming, error-prone, and difficult to scale as requests increase.

Existing Situation / Current Behavior: Students and teachers submit support requests, while IT staff manually classify and route the tickets. Category and Subcategory selection and ticket acknowledgement require manual effort.

Proposed Solution: Use ServiceNow Flow Designer to automatically classify tickets when they are created by analyzing keywords in the Short Description. The flow assigns the appropriate Category and Subcategory and sends an automated email notification to the caller.

Problem–Solution Fit: The solution directly addresses the manual classification problem by automating ticket categorization and acknowledgement. WiFi/Network maps to Network → Wi-Fi; Projector maps to Hardware → Projector; Password/Login maps to Access → Forgot Password; and Slow/Hanging maps to Performance → Slow Computer.

Expected Customer Benefit: Reduces manual effort for IT staff, improves ticket routing efficiency, provides consistent classification, reduces human error, and gives the caller an immediate confirmation that the ticket was created.
