

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	03 October 2026
Team ID	SWTID-2026-3593
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	IT Ticket Creation	Students and teachers can create an IT support ticket by providing the Caller Name and Short Description of the issue.
FR-2	Automatic Ticket Classification	Flow Designer analyzes the short description and automatically assigns the appropriate Category and Subcategory based on predefined keywords.
FR-3	Category & Subcategory Dependency	Subcategory options are dependent on the selected Category: Wi-Fi → Network; Projector → Hardware; Forgot Password → Access; Slow Computer → Performance.
FR-4	Email Notification	After ticket creation and classification, an automated email notification is sent to the caller confirming that the request has been submitted.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The solution uses a simple ticket creation process and automatically handles classification, reducing manual effort for IT staff.
NFR-2	Security	Only authorized users should be able to access or modify ticket data, following basic access-control practices.
NFR-3	Reliability	The automation should consistently classify tickets, maintain data integrity, and generate ticket records and notifications correctly.
NFR-4	Performance	Automatic classification at ticket creation reduces the time required for manual review and improves ticket routing efficiency.

NFR-5	Availability	The solution is designed for stable, reusable operation in the target school IT helpdesk environment and can be used for ongoing ticket processing.
NFR-6	Scalability	The no-code Flow Designer implementation is easy to maintain and can be extended with features such as assignment automation, SLA tracking, or predictive intelligence.
