1. Purpose of Document

The purpose of this document is to briefly explain the test coverage and open issues of the Auto-Ticket Classification using Flow Designer project at the time of the release to User Acceptance Testing (UAT).

The solution is built on ServiceNow for a school IT helpdesk. A student or teacher enters only the Caller Name and Short Description. A Flow Designer flow then scans the description for keywords (WiFi, Projector, Password/Login, Slow/Hanging), assigns the matching Category and Subcategory automatically, and informs the caller that the ticket was created.
